JUNE TIN MARKET REVIEW

- London Metal Exchange (LME)

NEWS ROUND-UP

- \$10 million Raised for Heemskirk Tin Project
- Elementos to Acquire 50 per cent of Iberian Smelting
- Positive Drilling Results at Renison
- Yunnan Tin and PT Timah Discussed Strategic Cooperation

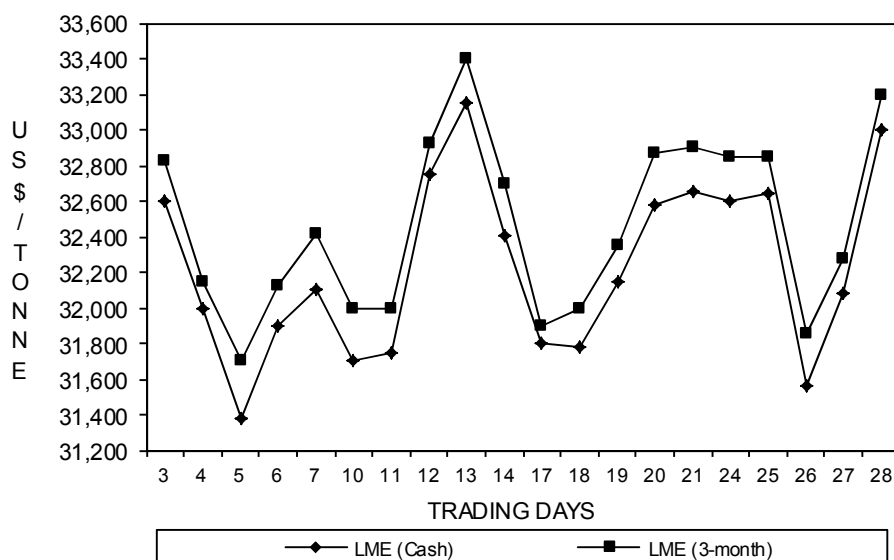

TIN STATISTICS

- LME Tin Prices
- World Refined Tin Stocks
- Malaysian Production, Number of Mines in Operations & Employment at Tin Mines by Mining Methods
- Malaysian Refined Tin Production, Import of Tin-in-Concentrates & Export of Tin Metal
- Malaysia's Domestic Tin Consumption
- World Mine Production
- World Refined Tin Consumption

The Malaysian Tin Bulletin is published by the Secretary of the Tin Industry (Research and Development) Board, Ministry of Natural Resources and Environmental Sustainability. The Bulletin is prepared from information obtained from official or other sources believed to be reliable and accurate. The Tin Board, however, cannot accept any liability for any error or omission therein.

JUNE TIN MARKET REVIEW

**LME TIN PRICES
JUNE 2024**

London Metal Exchange (LME)

Unsure of its next direction as market sentiment remained largely uncertain, tin trading on the LME during the month of June was mostly volatile and range bound between US\$31,375 to US\$33,400 per tonne. Trading movement of other base metals again impacted tin trading on the LME during the month.

The first trading week began with cash tin recording a price of US\$32,600 per tonne and 3-month tin of US\$32,825 per tonne. They were both lower than May's closing of US\$33,300 per tonne for cash tin and US\$33,525 per tonne for 3-month tin. The market weakened towards mid-week to reach the month's lowest price level on 5th June for both cash and 3-month tin at US\$31,375 and US\$31,700 per tonne, respectively. Thereafter, it reversed trend to move upward towards end of the trading week.

The tin price eased during the early days of the second trading week. Driven by strong demand, it rose to reach the month's highest price level on 13th June for both cash and three-month tin at US\$33,150 and US\$33,400 per tonne, respectively. Sentiment was bullish with buyers actively participating in the market. It eased at end of the trading week as demand subsided.

The metal was yet again traded on a downward momentum at the opening of the third trading week before rebounding strongly towards end of the week.

The tin price stayed somewhat flat during the early days of the final trading week. It declined sharply during mid-week before strengthening towards end of the trading week to close the trading month of June at US\$33,000 per tonne for cash tin and US\$33,200 per tonne for 3-month tin, higher than their respective opening prices.

Tin was traded on the LME during the month within a price range of US\$31,375 to US\$33,150 per tonne for cash tin, and between US\$31,700 to US\$33,400 per tonne for 3-month tin. June's average LME cash and 3-month tin prices were US\$32,229 and US\$32,465 per tonne, respectively.

NEWS ROUND-UP

\$10 million Raised for Heemskirk Tin Project

Stellar Resources has announced it has received firm commitments to raise \$10 million via a placement to accelerate drilling and mine studies at the company's Heemskirk project in Tasmania.

The placement will, on completion, give the company a cash position of approximately \$14 million. The funds would be used to complete a pre-feasibility study at Heemskirk.

The investment, largely from Paradise Fund and Regal Funds Management, comes three months after the company announced a \$3.2 million placement, including \$2.4 million from Nero Resource Fund.

The company's spokesman commented: "The funds raised will be critical to advancing our world class Heemskirk Tin Project through to development, as we look to accelerate drilling programs to aid our Scoping Study and Pre-Feasibility Study later this year."

The company is currently preparing an updated scoping study using the updated Mineral Resource Estimate on 7.48 Mt at 1.04 per cent Sn for 77,870 tonnes of contained tin. Stellar Resources anticipates it will complete this study in the third quarter of 2024. Alongside this study, the company will continue metallurgical test work and environmental studies.

Elementos to Acquire 50 per cent of Iberian Smelting

Elementos, a tin exploration and development company, has agreed to acquire up to 50 per cent of Iberian Smelting for €3.2 million over a five-year period. Iberian Smelting owns and operates the Robledallano smelter in Spain.

Currently, the major shareholder of Iberian Smelting, which holds a 90 per cent stake, is CRM Synergies, a predominantly secondary refined tin and solder producer. Robledallano is 220 km from Elementos' Oropesa project, set for first tin concentrate production by the end of 2027.

Elementos spokesman commented: "The completion of this transaction will be significant and will drive several key economic, strategic and political benefits to the company. Establishing a vertical integrated (mine-to-metal) supply-chain within Europe, which will propel Elementos down the value chain from a tin concentrate miner to a tin metal producer."

CRM Synergies spokesman commented: "The synergies between our two Spanish tin operations are significant, and it is

clear to CRM that the plan to together own the Iberian Smelting company with Elementos and operate the Robledallano Tin Smelter at highly efficient levels is mutually beneficial."

Previously operated as a lead smelter and a lead-acid battery recycling plant, Robledallano was acquired by CRM in 2021, who commissioned a new rotary furnace for tin processing in 2022. Currently, Iberian Smelting is using predominantly secondary feedstocks, mostly intermediate tin products, and recycled process residues.

The smelter holds all required permits and is licensed to smelt base metal concentrates and residue products up to 20 thousand tonnes per annum, and has an estimated tin feedstock capacity of 10-12 thousand tonnes per annum. Elementos highlighted the expansion potential, with the company committing to capital investment to install a vacuum furnace for further refining after rotary smelting.

Positive Drilling Results at Renison

Metals X has reported further drilling results from the Ringrose prospect at Renison Bell in Tasmania, with multiple-meter intercepts of high grade tin mineralization.

The company, which holds a 50 per cent equity interest in Renison operator Bluestone Mines, announced significant assay results including 87 meters at 0.65 per cent Sn from 204 meters. Within this drillhole, intercepts included 10.5 meters at 3.08 per cent Sn from 280.3 meters, 7.5 meters at 1.13 per cent Sn from 253.5 meters, and 5.3 meters at 0.52 per cent Sn from 268.9 meters. These results further confirm high-grade tin mineralization extending over 300 meters strike and 250 meters depth, open in all directions.

This update follows results reported earlier in 2024, which extended mineralisation 50 meters up-dip to the north and 50 meters down-dip to the west, and similarly positive multiple-meter high-grade tin intercepts.

Ringrose, located approximately 750 meters south of the existing Renison mine, has been explored as a potential new resource since 2019. Following an initial discovery drill hole intersecting 26.93 meters at 4.37 per cent Sn from 225.1 meters in 2022, the mine operators have completed a further 14 diamond drill holes targeting mineralisation at Ringrose.

The company's spokesman highlighted the positive results, noting the "new results, particularly the widths, in proximity to the previously reported results build [the company's] confidence that the area will generate a resource and allow us to progress studies to include this as a new area for potential future development".

Metals X plans to undertake additional drilling and metallurgical recovery testing ahead of next year's mineral resource estimate and life of mine plan update, which the company hopes will include Ringrose.

The project benefits from Ringrose being covered by the existing mining lease and its close proximity to underground workings at the existing mine, as well as its shallow depth relative to existing underground development. The company's spokesman commented that Metals X expects these factors to "allow the area to be developed with little or no additional surface infrastructure and at attractive extraction costs".

Surface diamond drilling is currently underway at two drill holes at Renison exploration targets, while a closer-spaced infill program of ten diamond drill holes for a total of 2,800 meters is expected to be completed in the third quarter of 2024. Further drilling will commence in the same quarter, to be completed in mid-2025.

Yunnan Tin and PT Timah Discussed Strategic Cooperation

Yunnan Tin (YTC), the world's largest refined tin producer and PT Timah, Indonesia's largest and the world's fifth largest producer, met in Jakarta earlier in June to discuss future strategic cooperation following discussions at ITA's International Tin Conference last month.

PT Timah's President Director, Ahmad Dani Virsal, and its senior officials welcomed YTC Chairman and General Manager, Liu Luke, and other senior management at YTC and its domestic and overseas subsidiaries, Yunnan Tin Trading and Yuntinic Resources. The companies discussed strategic themes of marketing, technology, and development, and will implement a Memorandum of Understanding between the companies.

Ahmad Dani Virsal highlighted the importance of global cooperation and companies supporting one another in the tin trade, commenting "PT Timah collaborates with various parties, including fellow tin producers, to maintain the sustainability of tin minerals".

Representatives from Yunnan Tin commented that the meeting was "very constructive", welcoming the possibility of strategic cooperation between the two parties.

* : The figures include high-grade tin (99.9% Sn) imported for consumption.

Note : Domestic consumption of tin metal refers to the use of tin in a particular application.
Sales to manufacturing industries have been used as proxy for consumption except
in the case of manufacture of tinplate which are actual tin consumption data.
